LEARNTOOLS
A PART OF SPILLFREE

PROFESSIONALIZING the feeding profession

LearnTools is a digital knowledge platform for digital training in the aquaculture industry, with its main focus on feeding

Our goal is to increase awareness about the importance of correct feeding and help create outstanding feeding performances.

With LearnTools, we are creating a common basis for understanding feeding, for easier communication and more efficient operations. Spillfree helps to give farmers better conditions to fully take out the potential in feeding by analyzing and discussing actual situations instead of feeding figures.

With cutting-edge competence in feeding, we develop and offer interactive online courses for training, skill development, mapping, and follow-up.

Follow-up included

Web-based and easy accessible
